

Amendments to the Claims:

Please cancel claims 1 to 18 without prejudice or disclaimer of subject matter.
Please add new claims 19 to 38, as follows.

This Listing of Claims will replace prior versions, and listings, of claims in the application:

Listing of Claims:

1 to 18 (cancelled)

19. (new) An information processing apparatus that outputs document data including a plurality of pages as a single print job, the apparatus comprising:

display means for displaying a setting screen;

selection means for selecting a specific page from the document data at which to halt processing of the print job;

setting means for setting an instruction to halt processing of the print job, wherein the instruction is set via the setting screen;

halt command generation means for generating a halt command to halt processing of the print job in accordance with the set instruction, wherein the halt command is inserted into the specific page selected from the document data;

job generation means for generating the print job based on the document data, wherein the document data includes the generated halt command inserted into the specific page; and

job output means for outputting the print job.

20. (new) An information processing apparatus according to Claim 19, further comprising form design means for generating the document data, wherein the document data includes form information and wherein the setting screen is provided by the form design means.

21. (new) An information processing apparatus according to Claim 20, wherein at least page print data and a composite form including the form information are assigned to each page of the document data.

22. (new) An information processing apparatus according to Claim 20, wherein the display means displays form configuration of the document data in a tree structure, and wherein the specific page is selected from the document data displayed in the tree structure.

23. (new) An information processing apparatus according to Claim 19, wherein the setting means sets at least one of a first method or a second method for canceling halting the processing of the print job, wherein the first method is initiated by a user and the second method is initiated upon expiration of a specified time period..

24. (new) An information processing apparatus according to Claim 19, wherein the setting means sets an instruction to either halt processing of the print job for the specific page or for the print job as a whole.

25. (new) A print processing control method of outputting document data including a plurality of pages as a single print job, the method comprising:

displaying a setting screen;
selecting a specific page from the document data at which to halt processing of the print job;
setting an instruction to halt processing of the print job, wherein the instruction is set via the setting screen;
generating a halt command to halt processing of the print job in accordance with the set instruction, wherein the halt command is inserted into the specific page selected from the document data;
generating the print job based on the document data, wherein the document data includes the halt command inserted into the specific page; and
outputting the print job.

26. (new) A print processing control method according to Claim 25, further comprising generating the document data, wherein the document data includes form information.

27. (new) A print processing control method according to Claim 26, wherein at least page print data and a composite form including the form information are assigned to each page of the document data.

28. (new) A print processing control method according to Claim 25, wherein the print processing control method is performed on an information processing apparatus on which a form design application for generating data including form information is executed, wherein the document data is generated by the form design application, and wherein the form design application provides the setting screen.

29. (new) A print processing control method according to Claim 25, further comprising displaying form configuration of the document data in a tree structure,

wherein the specific page is selected from the document data displayed in the tree structure.

30. (new) A print processing control method according to Claim 25, further comprising setting at least one of a first method or a second method for canceling halting the processing of the print job, wherein the first method is initiated by a user and the second method is initiated upon expiration of a specified time period.

31. (new) A print processing control method according to Claim 25, wherein setting the instruction to halt processing includes either halting processing of the print job for the specific page or for the print job as a whole.

32. (new) A print processing control program stored on a computer-readable storage medium to output document data including a plurality of pages as one print job, the print processing control program comprising:

- displaying a setting screen;

- selecting a specific page from the document data at which to halt processing of the print job;

- setting an instruction to halt processing of the print job, wherein the instruction is set via the setting screen;

- generating a halt command to halt processing of the print job in accordance with the set instruction wherein the halt command is inserted into the specific page selected from the document data;

- generating the print job based on the document data, wherein the document data includes the halt command inserted into the specific page; and

- outputting the print job.

33. (new) A print processing control program according to Claim 32, further comprising generating the document data, wherein the document data includes form information.

34. (new) A print processing control program according to Claim 33, wherein at least page print data and a composite form including the form information are assigned to each page of the document data.

35. (new) A print processing control program according to Claim 32, wherein the print processing control program is a form design application, and wherein the form design application generates data including form information, wherein the document data is generated by the form design application, and wherein the form design application provides the setting screen.

36. (new) A print processing control program according to Claim 32, further comprising displaying form configuration of the document data in a tree structure, wherein the specific page is selected from the document data displayed in the tree structure.

37. (new) A print processing control program according to Claim 32, further comprising setting at least one of a first method or a second method for canceling halting the processing of the print job, wherein the first method is initiated by a user and the second method is initiated upon expiration of a specified time period.

38. (new) A print processing control program according to Claim 32, wherein setting the instruction to halt processing includes either halting processing of the print job for the specific page or for the print job as a whole.
